Skills

Python programming

API integration

Algorithmic problem-solving

Programming fundamentals

Object-oriented principles

Data structures

Computational thinking

Mathematical modelling

Problem-solving

Logical thinking

Independent learning

Profile

I am a motivated and detail-oriented student with a strong interest in Computer Science and Software Engineering. I enjoy problem-solving and logical thinking, and I am particularly interested in how software and algorithms can be used to create efficient and meaningful solutions. Through my studies, I have developed a solid foundation in mathematics and programming, as well as the ability to work systematically and learn independently. I am eager to further develop my technical skills and contribute to challenging projects at university level.

Education

CANADIAN HIGH SCHOOL (DOGWOOD DIPLOMA)

Aug 2025 - Present

St Michaels University School, Victoria, Canada

- AP Calculus BC 12: advanced calculus, including limits, derivatives, integrals, and their applications to analytical problem-solving
- AP Computer Science A 12: programming fundamentals using object-oriented principles, algorithmic thinking, and basic data structures, computational thinking, logical reasoning, and structured problem decomposition applied to software development
- English First Peoples 12: academic writing, comprehension, and clear technical communication
- Digital Art 12: creative problem-solving and basic digital design skills
- Fitness & Conditioning 11: discipline, goal setting, and consistency developed through structured physical training
- independent learning, time management, and disciplined study habits developed through advanced coursework

INTERNATIONAL BACCALAUREATE

Sep 2010 - May 2025

The Sultan's School, Seeb, Oman

- Mathematics: Analysis and Approaches HL (Grade 5) – advanced calculus, mathematical modelling, and analytical problem-solving
- Computer Science HL (Grade 5) – programming, algorithm design, data representation, and computational thinking
- English A: Language and Literature SL (Grade 5) – academic writing, critical analysis, and clear written and verbal communication
- Arabic B HL (Grade 6) – advanced language proficiency and communication skills
- Business Management SL (Grade 5) – organisational planning, decision-making, and understanding business strategy and operations
- Chemistry SL (Grade 5) – scientific reasoning, data analysis, and experimental understanding
- World Studies Extended Essay (Science, Technology and Society) (Grade C) – interdisciplinary analysis of technological and societal challenges, independent research, structured academic writing, and project management
- Theory of Knowledge (Grade B) – critical thinking, reasoning, and evaluation of knowledge across disciplines

Honours and Awards

Oman Scholars Programme – Takatuf

Selected as one of 45 scholars out of more than 5,000 applicants for a highly

Time management

Leadership

Collaboration

Critical thinking

Goal setting

Discipline

Languages

English

Arabic

Italian

competitive national scholarship programme providing full funding for boarding school and university tuition.

- The selection process included multiple assessments and a summer residential programme simulating boarding-school conditions.
- Led a group project, developing leadership, collaboration, and problem-solving skills.
- Completed a self-directed research project proposing a software-based solution to improve mental health accessibility in Oman, designing a concept application that connects patients with specialised doctors while ensuring anonymity, privacy, and secure text and video communication.

Projects

Movie Search Engine

Feb 2025 - Apr 2025

Developed a movie search engine using Python and an open API to retrieve and display movie data dynamically.

- Implemented keyword-based search and filtering, as well as a user interaction feature allowing users to like content.
- Processed and structured API data efficiently, strengthening skills in Python programming, API integration, data handling, and algorithmic problem-solving.
- Translated user requirements into a functional software application.

Adaptive Test Engine

Apr 2026 - May 2026

The Adaptive Test Engine is a testing platform that personalizes questions based on student performance. My role focused on database, file management, and session storage.

- Helped build an AI-powered assessment platform that provides students with tailored practice questions across topics such as sorting algorithms, data structures, and object-oriented programming.
- Supported the database and file management side of the project, focusing on organisation, functionality, and user progress tracking.
